

1. Go to <https://startbootstrap.com/template-categories/all/>
Find a theme, click preview & download

2. Click Download

3. Move the file from your downloads to a safe place on your computer

```

34            trigger" href="#portfolio">Portfolio</a></li>
35            <li class="nav-item mx-0 mx-lg-1"><a class="nav-link py-3 px-0 px-lg-3 rounded js-scroll-
36            trigger" href="#about">About</a></li>
37            <li class="nav-item mx-0 mx-lg-1"><a class="nav-link py-3 px-0 px-lg-3 rounded js-scroll-
38            trigger" href="#contact">Contact</a></li>
39          </ul>
40        </div>
41      </div>
42    </nav>
43  </body>
44 </html>

```

4. *Open /edit the index.html file with any text editor (brackets, notepad++, VB, atom, etc.)*
5. This is where to edit the actual script – just replace all there filler with your stuff, comment out sections, etc. Save when finished and double-click the index to preview in-browser. You can even find/use/edit other bootstrap components you find elsewhere.

The screenshot shows the FileZilla project website in a browser. The browser's address bar displays 'filezilla-project.org'. The website has a red header with the FileZilla logo and the tagline 'The free FTP solution'. A left sidebar contains a navigation menu with categories: FileZilla (Features, Screenshots, Download, Documentation, FileZilla Pro), FileZilla Server (Download), Community (Forum, Project page, Wiki), General (FAQ, Support, Contact, License, Privacy Policy, Trademark Policy), and Development (Source code, Nightly builds, Translations, Version history). The main content area features a 'Promotion' banner for 'FileZilla Pro' with the tagline 'The Best FTP Solution' and icons for various cloud services. Below the banner is an 'Overview' section with text about the free FTP solution and its open-source nature. It also mentions 'FileZilla Pro' with additional protocol support and 'FileZilla Server' as a free open-source FTP and FTPS server. Support channels like forums, wiki, and bug/feature request trackers are listed. At the bottom of the overview, there are 'Quick download links' for 'Download FileZilla Client' (All platforms) and 'Download FileZilla Server' (Windows only).

Download FileZilla Client for Mac OS X

The latest stable version of FileZilla Client is 3.50.0

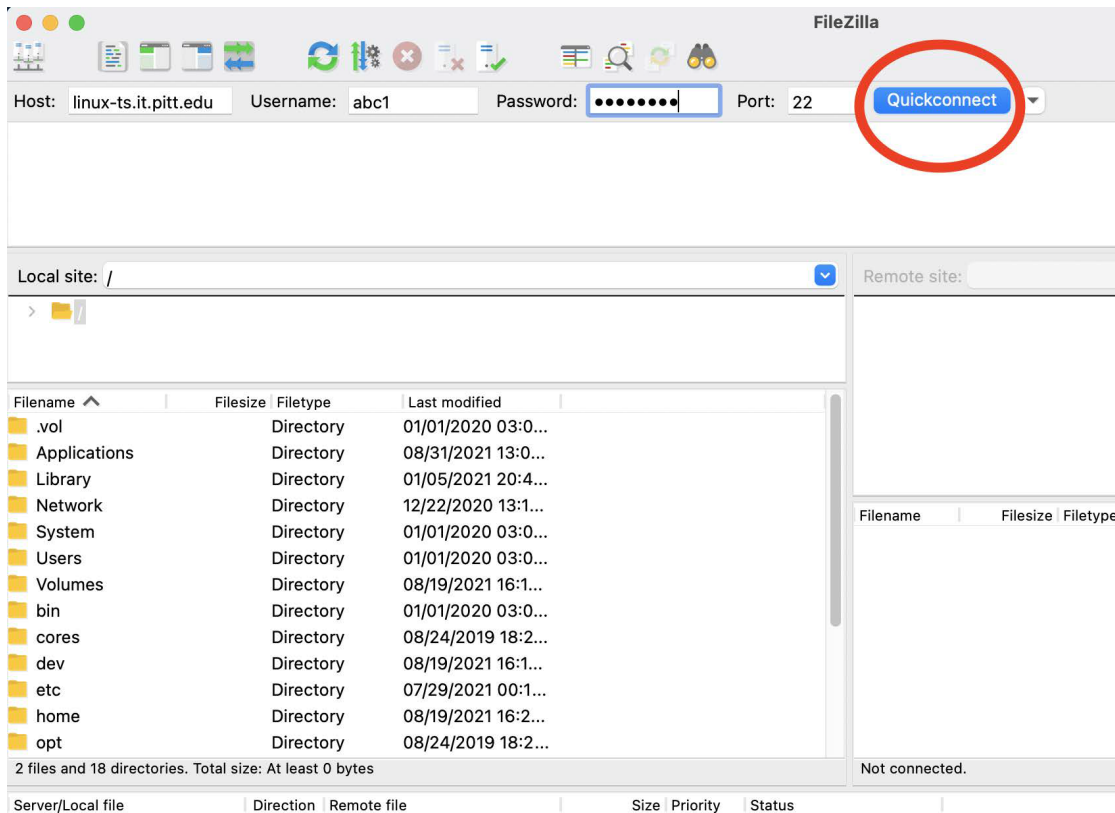

Please select the file appropriate for your platform below.

Mac OS X

Requires OS X 10.13.2 or newer

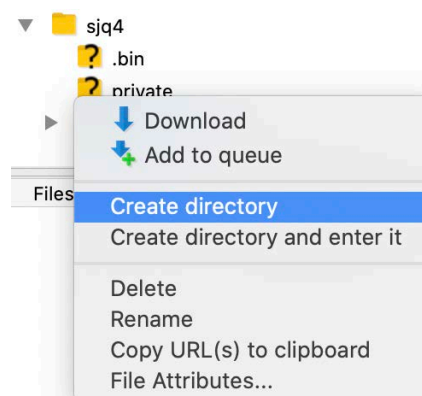

6. Go to <https://filezilla-project.org> and download the Mac OS X client. Install on your computer.

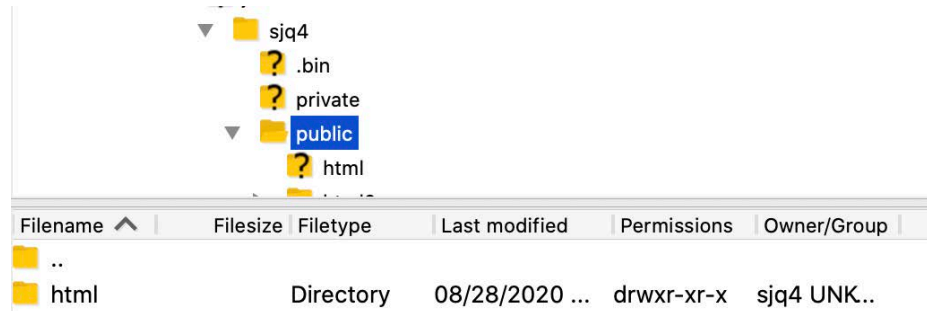

7. Did you remember to increase your server space? Do that now: Go to: my.pitt.edu.>Accounts Self-Service> Email & Messaging > Drop Down "UNIX Quota."
8. Enter information to access your server space: Host: linux-ts.it.pitt.edu ; Username ; Password ; Port 22
9. Click: Connect. This will open your file

10. Double click on your name. This will open up private and public directories.

11. Right click on your public directory. Click "Create Directory." Name the Directory "html"

11. Copy all website project files and dump them into your html folder.

12. Now your website will run off of your Pitt Server. Go to sites.pitt.edu/~yourusername

13. You are awesome!

(**Note, you can run multiple websites from your Pitt Server. Go into your html folder and right click>create directory>name new directory with a single word or words_with_between_them. To access this directory, go to sites.pitt.edu/~yourusername/new_directory)
