Go to https://filezilla-project.org and download the Mac OS X client. Install on your computer.

1. Increase your Pitt server space: Go to: mypitt.edu.>Profile>Manage Your Account > Email Messaging > Drop Down Increase UNIX Quota.

2. Enter information to access your server space: Host: sftp://unixs.cssd.pitt.edu ; Username ; Password   ;   Port 22

3. Click: Connect. This will open your file
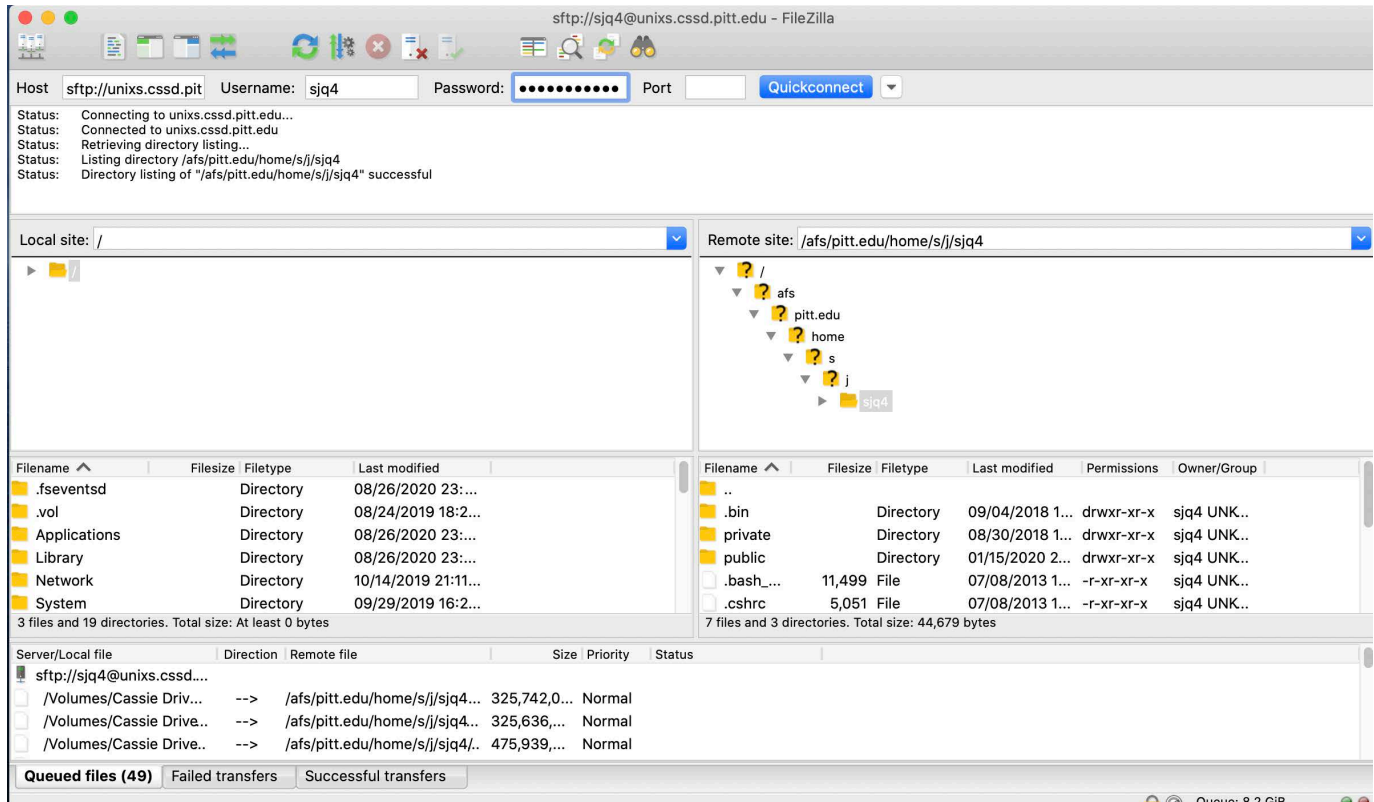

4. Double click on your name. This will open up private and public directories.

5. Right click on your public directory. Click "Create Directory." Name the Directory "html"
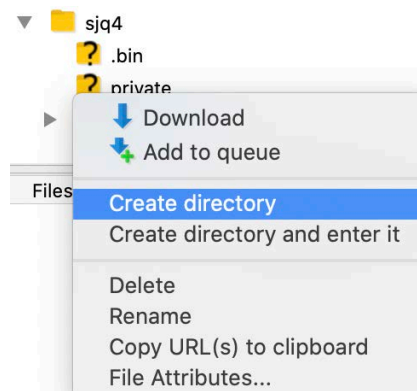

6. Copy all website project files and dump them into your html folder.

7. Now your website will run off of your Pitt Server. Go to pitt.edu/~yourusername

8. You are awesome!
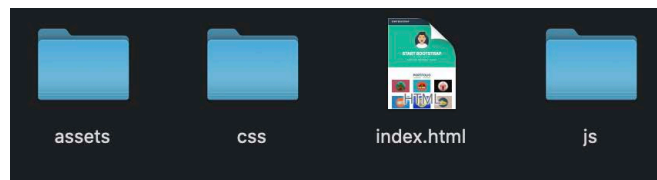

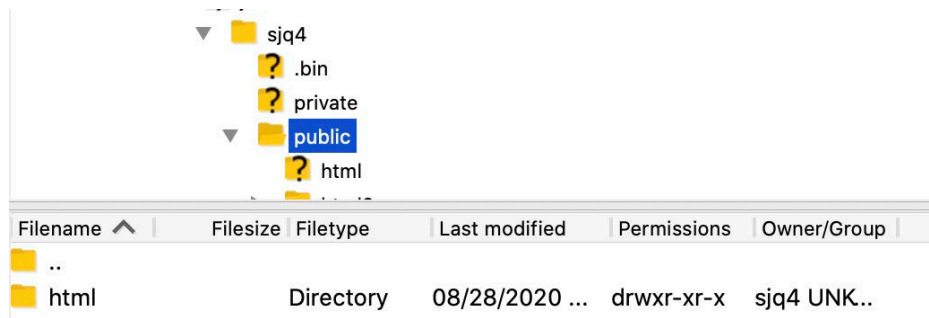

(***Note, you can run multiple websites from your Pitt Server. Go into your html folder and right click>create directory>name new directory with a single word or words_with_between_them. To access this directory, go to pitt.edu/~yourusername/ new_directory)
